AFTER APPLICATION, the coating results totally transparent, not modifying at all the aesthetic conditions of the glass.

Your glasses ready in a minute!

Vetrosmart

HOW TO USE

- **Before each use, shake the container vigorously.**
- **The surface must be clean and dry, without any possible lime stains, dirt or traces of detergents (depends on surfaces).**
- **Methods of application:**
 - 1- Manual Spray.**
 - Spread it helping yourself with a paper, microfiber cloth or similar to distribute the product evenly through the area, ensuring that the entire surface is treated.
 - Important:** Avoid the use of cloths that leave fabric traces while used.
 - Polish the surface with a dry cloth until removing any visible trace of product, ensuring the glass is totally transparent.
 - 2- Airless.**
 - Apply the product over the surface homogeneously, or in a single layer of higher amount of product or in two thinner layers.
 - Important:** It must appear a whitish "mottled veil" in the treated surface. (In case of not appear, it can mean not enough product).
 - Remove the whitish veil with a dry cloth until totally transparent.
- **In both cases is important:** to work in areas of appropriate size to avoid an excessive drying of the product which difficult its removal.
